

Chemicals & Allied Products

APS has extensive experience in the development, design and execution of chemical and allied product production facilities. Our use of three dimensional (PDMS®) design software insures accuracy and increases the value of our client's design dollars. A "hands on" on approach to the design process insures that our clients have a true partner in the ultimate success of their projects.

“ *Process expertise acquired from years of process experience.* ”

APS is a full-service technology company offering a wide variety of engineering and project services to a select list of worldwide clients. We provide experienced project managers, scientist, engineers and designers, all with real world field experience in their respective disciplines. We partner with our clients and strive to share their vision of success through the application of practical, constructible and fiscally responsible designs.

- Project Development Studies
- ROM & Detailed Cost Estimates
- Process Development & Design
- 3-D Modeling (PDMS®)
- Process Modifications
- Multi-Discipline Design
- Preconstruction Services
- Procurement Assistance
- Value Engineering
- Operation & Maintenance Plans
- Start Up & Commissioning
- Process Optimization
