

# Energy and Alternative Fuels

APS has extensive experience in the planning, development, design, installation, commissioning, and start-up of both traditional and alternative energy facilities located worldwide. Our team members are experienced technology providers in the industry, skilled in process development, engineering design, start-up and facility operations.

“ *Improving on the past while developing for the future.* ”

APS is a full-service technology company offering a wide variety of engineering and project services to a select list of worldwide clients. We provide experienced project managers, scientists, engineers and designers, all with real world field experience in their respective disciplines. We partner with our clients and strive to share their vision of success through the application of practical, constructible and fiscally responsible designs.
